Rimini Consult™

World-class professional services from our ERP experts

Rimini Consult is a natural extension of our Unified Software Support and Services with the same trusted relationship, quality, and proficiency that our clients value.

Our highly specialized team of global experts deliver discrete, targeted, and innovative solutions to resolve complex ERP and security issues. We can help you optimize, evolve, and transform your Oracle, SAP, and Salesforce® systems.

A Broad Spectrum of Rimini Consult™ Professional Services
Optimize, Evolve, and Transform your Enterprise Systems

Cloud and Database Migrations
Lift and shift to cloud/open-source database environments and optimize cloud costs and operations while reducing your time to value

Interoperability and Integration
Process analysis and solutions that help future-proof your technology, provide interoperability assurance, and enable composable ERP

Security Strategy and Hardening
Assess, design, and implement a security strategy and roadmap for your business

Technology Assessments
Deep dive into a specific subject or trouble area to help you understand the root cause of issues or challenges and provide a path forward

Observability and Monitoring
Health checks and implementation of monitoring solutions to identify potential risks

Roadmap and Strategy
Consultancy that analyzes your strategy, roadmap, and business goals to deliver a Business-Driven Roadmap aligned to your needs

Bespoke/Custom Projects
Design and implementation of niche projects/customizations to provide desired functionality without the need to upgrade

Staff and Skills Augmentation
Resourcing models that flex to meet demand during peak business periods

Rimini Consult™

Optimize

Maximize your ROI on existing ERP investments by improving performance, broadening integration, and addressing critical issues

Examples include:

- Database and Application Health Checks that provide a broad assessment of your implementation, and identify risks, opportunities, and a Smart Path forward for improving performance, security, and alignment to your broader goals
- Oracle Database performance and security projects that optimize and help secure your existing implementations
- Data Purge and Archiving to help reduce your overall footprint and compliance exposure, free up resources, and reduce costs

Evolve

Evolve your existing ERP investments by implementing modules and customizations, and moving resource-intensive components to the cloud

Examples include:

- Database Strategy and Roadmap engagements that provide independent expertise on how to best leverage your existing investments with enhancements to improve capabilities, security, and cost savings
- Implementation of pre-purchased SAP or Oracle modules to expand your capabilities
- Lift and Shift of resource-intensive ERP components to enhance performance and minimize risks

Transform

Transform your enterprise software portfolio by leveraging open-source software, integrating purpose-built applications, and aligning business processes to capabilities

Examples include:

- Integration of existing ERP core modules with modern, best-fit SaaS solutions
- Migration and modernization of costly Oracle Databases to open-source databases, e.g. PostgreSQL, in any public cloud provider, e.g. AWS, Azure, or Google Cloud
- Leveraging our independent expertise to help you design a Business-Driven Roadmap and composable ERP strategy with best-fit technologies to drive growth that meets or exceeds business goals in changing market conditions

Rimini Street®

Rimini Consult™

We understand that each organization's challenges are unique. To maximize your investment, we've developed a simple framework for capturing your needs and aligning on a solution.

Listen and learn to understand the problem(s) to be solved

Align Rimini Street solutions with engagement outcomes

Agree and commit to a shared path forward
